

**Overview of NATO
Advanced Research Workshop
'Nanomaterials and nanodevices
for ecological security'**

This book is devoted to a wide range of problems concerning applications of nanomaterials and nanodevices for effective solutions of modern ecological problems. The leading experts in nanoscience and nanotechnology have presented the key theoretical, experimental and utility topics related to the creation of novel nanoscale devices that would ensure a significant increase in the ecological security. A wide range of safety problems including various kinds of life risks, technogenic and terroristic risks have been discussed.

The reader can use this flow chart as a supplement to the index to assess and identify those papers, which closely match specific topics of interest.
